2008 International Committee of Medical Journal Editors Statement on Authorship Requirements

Authorship credit should be based on

1. Substantial contributions to conception and design, acquisition of data, or analysis and interpretation of data;

2. Drafting the article or revising it critically for important intellectual content; and

3. Final approval of the version to be published.

Authors should meet conditions 1, 2, and 3

Acquisition of funding, collection of data, or general supervision of the research group alone does not constitute authorship. All persons designated as authors should qualify for authorship, and all those who qualify should be listed.

Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. Acquisition of funding, collection of data, or general supervision of the research group, does not justify authorship. This indicates no automatic authorship for technicians, students, coordinators, or chairmen; an active contribution is always required.
