The Rapid Rejection Criteria- IE AVOID THESE

1) The question being asked is not interesting;
2) The question being asked has been adequately answered already;
3) The question being asked has not been previously asked, but the answer is obvious from what is known in the field;
4) The hypothesis is wrong (usually reflecting inadequate preparation);
5) The methodology cannot possibly address the hypothesis;
6) The study is obviously underpowered;
7) The manuscript does not answer the hypothesis;
8) The manuscript contradicts itself;
9) The conclusion is not supported by the data.
